Your Mission:

Retreive the following samples from archives:

3-00121
3-00122 (From 3351 Gaylord Street)
3-00130

3-01106
3-01104 (From 3549 Race Street)
3-01108

Prepare two composite samples by compositing a portion of the three samples from each address separately, i.e., combine 3-00121, 3-00122, and 3-00131 into one sample; combine 3-01106, 3-01104, and 3-01108 into a separate sample . The composite samples should be as large in mass as possible, so retain only about 10 grams in each bag for any future analysis. Return these small 10 gram samples to the archive in the original 6 bags .

Homogenize and dry the two composite samples and sieve to the fine fraction per the sample preparation SOP. Mary Goldade of ISSI will take custody of these two composite samples tomorrow when she is out for the MDL study (at about 3:00 pm).

Call me with any questions. These samples will be used in the pig study...thanks for the help.

Bonnie
